Operating Highlights

Train 178(06) - Dedham, MA - Engine Failure

07APR26: Train 178(06) with E/631 plus 9 cars, carrying 261 passengers stopped at RTE 128 Station/MP 217.2 on the Amtrak New Haven to Boston Line after crew members observed arcing and reported a small explosion on the rear pantograph of E/631. The crew consulted with RFE M. Williams and inspected, then attempted to raise the other pantograph. The attempt to raise the other pantograph wasn't successful. The decision was then made to terminate Train 178(06) at RTE 128 and transfer all 261 passengers to Keolis Train 892, which continued east into Boston South. The passengers were on the equipment for approximately 30" with no HEP. The temperature at the time of incident was 35°.

Rescue diesel motor 122 was readied at Southampton Yard and then dispatched to rescue the 178(06) equipment.

Palm Springs, CA Closure - High Winds

13JAN25: Palm Springs Station, located at MP 588.2 on the Union Pacific Railway Yuma Subdivision, is subject to temporary intermittent closures caused from high winds creating a build up of sand in the switches to enter Garnet Siding. This sand build up prevents the switches from being lined, and causes the internal gear mechanism of the switch to cease up. This prevents train crews from hand lining the switch and being able to access the station platform. Standing policy states that when this occurs trains will bypass the station at Palm Springs and passengers will be transported to the next stop of Ontario, CA or Yuma, AZ, no alternate transportation will be provided.
