Train 14(13) North of Klamath Falls, OR - Positive Train Control

14JAN26: Train 14(13) 26-FOI-00257-00000005643 UNCLASSIFIED 466-201 PRR Cascade Subdivision, 36.6 miles north of Klamath Falls, after PTC unexpectedly disengaged on lead locomotive E/313. Crew attempted to restore but were unsuccessful. Train was then authorized by the Amtrak PTC Help Desk to continue into the Chemult depot, MP 503.2. At Chemult, the crew (assisted by the Amtrak PTC Help Desk) was able to restore PTC. Soon after departing however, the PTC unexpectedly disengaged again. The train was then authorized to continue to Eugene, not to exceed speed of 59MPH.

At Eugene station the crew performed a power down and restart of the Positive Train Control system as prescribed by CNOC Mechanical Technicians. This temporarily restored PTC, unfortunately disengaged once the train started moving. This led to the service being restricted not to exceed 59 MPH for the trip to Portland.

At Portland station, the fresh crew were able to identify a loose wheel speed sensor (2nd on fireman's side) . The bolts were replaced and tightened. This restored Positive Train Control Function for the remainder of the trip to Seattle.
