Acela 2203(12) Terminated Wilmington, DE - Engine Failure

12JUL25: at approximately 938A-ET, Train 2203(12), TS-6, PC2031, 6 cars, PC/2030, became disabled just north of Wilmington, DE at Wine/MP26 on the Amtrak Philadelphia to Washington Line. The train was without head end power, and radios were non-operational, due to unknown penalty and faults on Lead Power Car 2031. There was 201 passengers onboard and the outside temperature was a reported 80 degrees. Train 101(12) was held behind in case a passenger transfer was necessary. Crew worked with an Amtrak Road foreman and High Speed rail mechanical to troubleshoot. A rescue engine was readied in Philadelphia to assist if necessary. Lead Power Car had a K-AUX 2 fault preventing the Main Circuit Breaker (MCB) from closing. It was reported by Hi-Speed Rail that the Engineer was able to drop the Pantograph, isolating the lead Power Car 2031, making it possible to operate from the Rear Power Car 2030. At 10:09A-ET, the crew were able to restore power, HEP and radio. The crew advanced 2203(12) to Wilmington, where all passengers were discharged and accommodated on Train 101(12) and 153(12). The equipment was deadheaded to Washington to further inspect.

Due to this, several Acelas train-sets were short-turned in order to prevent cancelling service, causing some delays.

Acela 2203(12) Terminated Wilmington, DE - Engine Failure

12JUL25: at approximately 938A-ET, Train 2203(12), TS-6, PC2031, 6 cars, PC/2030, became disabled just north of Wilmington, DE at Wine/MP26 on the Amtrak Philadelphia to Washington Line. The train was without head end power, and radios were non-operational, due to unknown penalty and faults on Lead Power Car 2031. There was 201 passengers onboard and the outside temperature was a reported 80 degrees. Train 101(12) was held behind in case a passenger transfer was necessary. Crew worked with an Amtrak Road foreman and High Speed rail mechanical to troubleshoot. A rescue engine was readied in Philadelphia to assist if necessary. Lead Power Car had a K-AUX 2 fault preventing the Main Circuit Breaker (MCB) from closing. It was reported by Hi-Speed Rail that the Engineer was able to drop the Pantograph, isolating the lead Power Car 2031, making it possible to operate from the Rear Power Car 2030. At 10:09A-ET, the crew were able to restore power, HEP and radio. The crew advanced 2203(12) to Wilmington, where all passengers were discharged and accommodated on Train 101(12) and 153(12). The equipment was deadheaded to Washington to further inspect.

Due to this, several Acelas train-sets were short-turned in order to prevent cancelling service, causing some delays.
