Train 42(29) Pittsburgh, PA - Engine Failure

29MAR26: Train 42(29) operating with engines 123/NS8134, 7 coaches, and 197 customers, was delayed departing Pittsburgh, PA, on NS Pittsburgh_72PT subdivision, due to engine 123 having IETMS failure of no audible alarm. This required a second engine, NS8314, to be sourced and added before departing Pittsburgh. An NS crew was on duty at 6:00am-et to bring the motor to the station. NS8134 was delayed getting to the station due to holding for 2 NS freight trains, who were short on federally governed Hours of Service, to clear. Once the freights cleared, NS8134 was able to proceed towards Pittsburgh station where it was added to train 42(29).

Once in Harrisburg, train 42(29) was further delayed removing NS8134 and adding amtrak loco 644. Initially there was uncertainty as to where NS8134 was going to be placed once released from train 42(29) which added to the delay. Once all parties, NS, and Amtrak local supervision, came to an agreement about NS8134 set out and pick up location, train 42 was able to remove the NS loco and and add the Amtrak loco. Once all necessary tests were completed, train 42(29) was able to board its customers and depart Harrisburg, PA.
