Train 66(19) - North of Wilmington, DE - Engine Failure

20SEP26: Train 66(19) with E/633 plus 5 cars, carrying 85 passengers was initially delayed on the Amtrak PW Line at MP 19.0 due to the MCB on E/633 opening and causing the HEP to drop. The crew recycled and managed to close the MCB, restore HEP, and get back on the move north. Shortly after, at MP 12.6, the MCB opened again, dropping HEP as well. The crew again recycled, resolved the issue, and got back on the move north into 30th Street Station/Philadelphia.

The train held for mechanical personnel in the station. Once on scene, mechanical inspected the equipment and gave the all clear for the train to proceed east to NYP.

Due to these delays, and the already in progress Metro North outage due to the Walk Bridge Project, the window to traverse the Metro North Territory NYP-NHV was missed.

At the time of this writing, the operational plan was relayed as follows:

The 85 remaining passengers were connected on Metro North trains 3502 and 3504, which departed Grand Central Station at 4:54am and 6:00am, respectively, for travel from New York to New Haven. Once at New Haven the passengers were moved to Amtrak Trains 150(20) or 160(20).
