Pacific Surfliners San Clemente Pier, CA - Ocean Water Affecting Track Indication

25JUL26: Multiple Pacific Surfliner trains experienced delays due to high tide ocean conditions affecting the Metrolink Orange Subdivision east of San Clemente Pier, between approximately MP 206 and MP 207. The high tides caused track indication failures, requiring trains to flag through the affected area at restricted speed. These restrictions resulted in cascading delays throughout the corridor, including additional train meets, congestion, and late-turn equipment impacts.

At approximately 11:50 PM PT, Metrolink reported a track-blocking event caused by a ballast washout in the same area. Maintenance crews were mobilized to make repairs, and rail service through the location was suspended pending restoration of the track structure.

Due to the overnight outage and the inability to secure bus transportation, the following Pacific Surfliner service adjustments were implemented:

- Train 595(25), carrying 461 customers onboard, was terminated at Oceanside (OSD) and returned toward its origin as a drop-off-only movement.
- Train 794(25), carrying 132 customers onboard, was terminated at Irvine (IRV) and returned toward its origin as a drop-off-only movement.
- Train 562(26) was canceled in its entirety, with customers directed to the next available service.
- Train 761(26) was canceled between San Diego and Los Angeles and instead originated in Los Angeles for service to Goleta (GTA).

Maintenance forces continued repair efforts while rail operators implemented service recovery measures across the corridor.

Train 301(25) South of Springfield, IL - Engine Failure

25JUL26: At 10:45AM-CT, Train 301(25), Engine ID4627-5, stopped 13.8 miles south of Springfield, IL (MP185.1), on the UPRR Springfield Subdivision at MP198.8 due to a low oil fault on locomotive ID4627. The engine was shut down with no head end power while the crew worked with CNOC Mechanical and Siemens to troubleshoot the issue. The 171 customers onboard remained on the train with outdoor temperatures of 75 degrees and cloudy conditions. Troubleshooting determined the locomotive had no hydrostatic oil and could not be restarted. Train 301(25) was subsequently terminated at location.

The Bloomington-Normal Road Foreman responded to the train at 12:00PM-CT with oil in an attempt to restart the locomotive and restore head end power; however, those efforts were unsuccessful. Train 319(25) was utilized as the rescue train and coupled onto the head end of Train 301(25) at 1:45PM-CT with HEP restored at 2:08PM-CT. Once secured, the double-draft movement departed the location and was back on the move to St. Louis at 2:18PM CT. Four buses were secured and staged trainside between 2:00PM-CT and 3:00PM-CT and ultimately shadowed the train to St. Louis.

As a result of the disruption and lack of equipment, Trains 306(25) and 301(26) were cancelled entirely. Train 306(25) had three on time buses secured to operate between St. Louis and Chicago. Train 301(26) had five on-time buses secured:

-Bus four operated from Chicago making stops at Bloomington-Normal and Springfield.
-Bus five operated between Chicago and St Louis making all stops.
