Train 40(05) North of Rocky Mount, NC - Engine Failure

06DEC25: Train 40(05) E/333, E305, 10 cars with 129 passengers onboard, was delayed 10 miles north of Rocky Mount, NC at MP109.9 on the CSX North End Subdivision due to an air leak on the main reservoir of engine E/333. Crew worked with both CNOC and Siemens mechanical to resolve. Head end power(HEP) was down for approximately one hour while troubleshooting and to set-up the trail to operate as lead. The weather was a reported 42 degrees and cloudy. The train came to a stop on the single main track, over a bridge with no walkway present, which hindered the initial onboard operating crew with immediately assessing the failure. CSX mechanical was called in to assist, along with an Amtrak Assistant Superintendent of Road Operations, Road Foreman and Trainmaster. After significant troubleshooting, the lead locomotive E/333 was isolated, and the trail locomotive E/305 was utilized to shove disabled Train 40(05) clear of the bridge. Once crew determined the leak to be from a hole in the main reservoir hose and replaced it, the train was able to proceed north. Train 80(06) was delayed due to this, and held at Rocky Mount station until 40(05) was clear of the main track. Train 89(06) was delayed at MP100.7 being held for both 80(06) and 90(05) and two additional northbound freight trains to pass.

Conditions remained comfortable onboard the train for passengers and service recovery was implemented on both 40(05) and 80(06) with snack packs and bottled water distributed to all coach passengers.

Train 7(04) East of Ephrata, WA - Car Failure

06DEC25: At 4:44AM-PT, Train 7(04), E/311-E/72-6 Cars, stopped 37.6 miles east of Ephrata, WA/MP1599.1, on the BNSF Columbia River Subdivision, at MP1561.5. The train stopped in order for the crew to inspect coach car 34093 after setting off a wayside Level 1 hot bearing alarm for the L1 wheel 29 at MP1555.8. Upon inspection, it was found that the bearing was warm reading 121 degrees while all the others read in the 50s. This required the car to be set out at the first available location of Irby/MP1562.1. Due to switch issues at Irby, Train 7(04) had to advance to Marlin/MP1569.9 to setout the car. Head end power was intermittent during the setout with 33 passengers onboard and an outside temperature of 37 degrees. At 7:09AM-PT, the setout was complete and Train 7(04) was back on the move west. Seattle did have a replace coach available in Seattle to fill out the trainset for its equipment turn of Train 8(06).

Customer Impact: Fifteen passengers were able to be upgraded to sleepers from coach at Wenatchee. One express bus arriving to Leavenworth, WA at 10:30AM was able to take all but one passenger express to Seattle. The remaining one passenger at Leavenworth boarded the train to their final destination of Edmonds. The remaining passengers onboard were able to seat in the dining car to their final destination.
