Train 338(16) Glenview, IL - Car Failure

16MAY26: Train 338(16), with engines IDTX4610 and IDTX4613, 4 cars, and 151 customers on board was delayed departing Glenview, IL/MP17.32 on the CPKC C&M subdivision due to an excessive air leak. HEP remained active throughout the delay. An Amtrak Road Foreman responded to the scene. With the assistance of the road foreman and Chicago Mechanical by phone, the crew determined the quiet car, IDTX4013, was the cause of the air leak. After making temporary repairs, train 338(16) activated the door bypass feature on engine IDTX4610. Train 338(16) stopped again east of Glenview, IL with loading issues. After troubleshooting, the crew activated the door bypass feature on the engine IDTX4610 and was able to continue east.

Due to the late operation of train 338(16), train 339(16) was delayed departing Chicago, IL., while car IDTX4013 was cut out with no replacement.

Due to the late operation of 339(16), train 342(16) was delayed departing Milwaukee, WI as the 339(16) crew turned for 342(16).

Train 353(16) West of Battle Creek, MI - Car Failure

16MAY26: Train 353(16), E/ID4607-5 Cars, experienced multiple undesired emergency brake applications while operating west of Battle Creek, MI (MP175.7). The first occurrences were reported near MP128.9 and again at MP141.2. Troubleshooting determined the likely source to be an air-related issue on car ID4011. The crew reset the associated breaker and circuit valve on that car, which temporarily restored operation and allowed the train to continue westward.

After proceeding past New Buffalo, MI (MP218.9), the train encountered a third emergency application at Chesterton (MP238.9). This event presented additional difficulty, as the train experienced issues recovering from the emergency condition. The crew engaged CNOC Mechanical, LAX Mechanical, and the Road Foreman for further troubleshooting. As part of the diagnostic process, the main reservoir was cut out behind car ID4126 under the assumption that isolating that portion of the consist might resolve the issue; however, this action did not correct the problem. The train remained at Chesterton while additional troubleshooting efforts continued in coordination with mechanical and operating support teams. Further troubleshooting determined that cutting out the 21 vent valve on the air brake rack to engine ID4607 was necessary. Once completed, the air issue was resolved, allowing Train 353(16) to recover and continue its movement west. As a precaution, the Assistant Superintendent of Road Operations shadowed the train for the remainder of the trip.

Train 353(16) went into emergency once more at mile post 512.9 before arriving in Chicago Union Station.
