Operating Highlights

Train 710(04) West of Wasco, CA - Third Party Contractor Engine Failure

05MAY26: Train 710(04), operating with CC/C8308, seven cars, E/C2005, and 85 customers onboard, was delayed at Colonel Allensworth Park Station (MP 932.0) on the BNSF Bakersfield Subdivision due to a locomotive performance issue. The crew reported power limitations, noting the locomotive was unable to load above throttle notch 1. The crew coordinated with TASI Mechanical and Amtrak management, and troubleshooting determined the engine temperature had exceeded normal operating limits, requiring a cooldown period.

Once the locomotive cooled sufficiently, Train 710(04) was able to proceed into Bakersfield, CA. Due to continued equipment reliability concerns, the decision was made to hold the trainset in Bakersfield overnight for further inspection and repair by Mechanical forces. As a result of this decision, the following service adjustments were implemented to protect operations:

- Train 712(04) equipment was turned to operate as Train 719(04).
- Train 714(04) equipment was turned to operate as Train 703(04).
